SUMMARY

Software Engineer with hands-on experience building and shipping full-stack applications using Next.js, TypeScript, Node.js, REST APIs, and AWS. Built and deployed 10+ customer-facing pages, developed 20+ reusable UI components, and architected an AWS S3-based content delivery pipeline that eliminated the need for application redeployments for content updates. Strong foundation in Data Structures & Algorithms with 170+ problems solved and a 1560 LeetCode contest rating, along with knowledge of system design and software development practices.

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React, Next.js, Redux Toolkit, React Router, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, REST API Design, TypeORM

Databases: MySQL, PostgreSQL, Redis

Cloud & DevOps: AWS, Docker, Nginx, Vercel, Git, GitHub, GitLab, CI/CD, Linux

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Low-Level Design, Agile/Scrum

EXPERIENCE

Seaflex Technologies — Software Engineer Intern

Jan 2026 – Jul 2026

Ahmedabad, India (On-site)

- Shipped 10+ customer-facing pages and internal portal modules in Next.js/TypeScript, directly contributing to feature delivery on the company's production platform.
- Architected a dynamic content-retrieval pipeline integrated with AWS S3, eliminating full application redeployments for blog and case-study content updates and cutting content-publish turnaround from hours to minutes.
- Built and standardized 20+ reusable UI components, improving development velocity and consistency across multiple application modules.
- Implemented pagination across content-heavy modules, reducing initial page payload and improving load performance.
- Integrated REST APIs across frontend-backend workflows to enable seamless data exchange across core business features.
- Participated in code reviews, debugging, and performance optimization within an Agile team using Git and GitLab.

PROJECTS

SeaBasket — E-commerce Platform

Next.js, TypeScript, Node.js, Express.js, MySQL

- Built a full-stack e-commerce platform covering authentication, product catalog, cart, checkout, order tracking, and profile management.
- Implemented secure JWT authentication with OTP verification, password reset, and automated email notifications.
- Designed REST APIs with Express.js, TypeORM, and MySQL supporting product search, filtering, reviews, ratings, and pagination.
- Used Redux Toolkit for global state management, structuring components for scalability and reuse.

ShortLink — Distributed URL Shortener - [Source Code](#)

Node.js, Express.js, PostgreSQL, Redis, Docker, Nginx, k6

- Built a distributed URL-shortening service with PostgreSQL persistence, Redis caching, link expiration, click tracking, Base62 short-code generation, and Redis-based rate limiting (INCR/TTL, 5 requests per 60 seconds).
- Dockerized the complete stack and configured Nginx to load balance requests across two API instances, enabling horizontal scaling.
- Load-tested the system with 50 concurrent virtual users, processing 1,500 requests at ~49 req/s with 0% request failures.

House Price Prediction

Python, Pandas, Scikit-learn, Matplotlib

- Built a regression-based housing price prediction model on a real-world dataset, evaluated using MAE and R² metrics.
- Performed data preprocessing and feature engineering to improve model accuracy; visualized trends and predictions with Matplotlib.

ACHIEVEMENTS

- Solved 170+ Data Structures & Algorithms problems on LeetCode, reaching a contest rating of 1560.

EDUCATION

SAL Engineering and Technical Institute — B.E, Information Technology

Jul 2023 – Jun 2026

Ahmedabad, India | CGPA: 8.59
